

JAN KOČÍ

SYSTEMS ARCHITECT

TELEPHONY · INFRASTRUCTURE · AI
INTEGRATION · AUTOMATION

Systems architect with 18+ years of experience across Linux, VoIP, enterprise operations and AI-driven automation. I bridge product engineering with real-world infrastructure and telephony deployments.

CYBERCORE

Infrastructure Context & Intelligence Platform

CyberCore

CyberCore turns operational reality into evidence, knowledge and governed decisions. Automation executes only after explicit human approval.

CORE CAPABILITIES

- ✓ Infrastructure context and discovery
- ✓ Evidence and traceability
- ✓ Governed automation
- ✓ AI-assisted operations

PROJECT STATUS

Public open-source repository — release in progress

View on GitHub
github.com/cyberDJs/CyberCore

PROFESSIONAL FOCUS

- Infrastructure Architecture
- VoIP / PBX / Telephony
- Automation & DevOps
- Cloud & DevOps
- AI & Knowledge Systems
- Observability & Monitoring
- Security & Governance
- System Integration

TECHNOLOGY STACK

SELECTED EXPERIENCE

- **Pražský servis**
Lead Technical Specialist
- **Mavenir**
Senior Support Engineer, MCO / Global Support
- **Česká spořitelna**
Linux Administrator
- **Apollo Games**
L2 Linux Administrator

LET'S BUILD EVIDENCE-DRIVEN INFRASTRUCTURE

Available for infrastructure architecture, technical leadership and CyberCore partnerships. →

TELEPHONY, SYSTEMS & DELIVERY

SELECTED TELEPHONY CASE STUDIES

SIMIO a.s. — Multi-site Asterisk/Trixbox Deployment 2007–2009

- Designed and deployed the company's first Asterisk/Trixbox PBX infrastructure.
- Supported approximately 45 call-center users across Prague 3, Prague 9 and Olomouc.
- Operated 3–5 Linux servers and up to 10 SIP gateways.
- Integrated SIP telephony, IP endpoints, call routing and distributed connectivity.
- Supported expansion from one site to three locations.
- Diagnosed telephony, networking and SIP/RTP interoperability issues.

Legacy PBX Recovery and Vendor Independence PKL62 / eCredit

- Investigated recurring internal-line outages on an externally operated Asterisk system.
- Identified a legacy platform that had remained outdated for approximately eight years.
- Recovered and modernized the PBX and transferred its operation in-house.
- Operated the system successfully for another three years.
- Improved reliability and removed dependency on the original supplier.

VoIP Campaign Routing Project 2013

- Designed an inbound IVR and call-routing workflow using SIP and PBX scripting.
- Automated a recorded welcome message and handover to campaign volunteers.
- Combined carrier behavior, call routing and telephony automation into a low-friction caller experience.

Additional Asterisk / Trixbox Operations Selected environments

- Maintained and modernized PBX environments for Mliven, PKL62, Pražský Servis IT and other organizations.
- Worked with Cisco and Grandstream devices, MikroTik networking and OpenVPN.
- Provided Linux administration, routing, firewalling, VPN and production troubleshooting.

RECENT ENTERPRISE EXPERIENCE

Jun 2024 – Present

Pražský servis
Lead Technical Specialist
Architecture, infrastructure operations, customer support, automation and technical delivery.

2022 – 2023

Mavenir
Senior Support Engineer, MCO / Global Support
Production support, incident ownership, Linux, networking, databases and distributed systems.

2021 – 2022

Česká spořitelna
Linux Administrator
Enterprise Linux administration and production operations.

2021

Apollo Games
L2 Linux Administrator
Second-line production support and Linux troubleshooting.

2017 – 2021

EVskateboards
Development Team Lead / Founder
Product development, technical leadership, electronics, infrastructure and multidisciplinary engineering.

2015 – 2018

RF-Hobby
IT Director
IT strategy, infrastructure ownership, operations and vendor management.

2007 – 2009

SIMIO a.s.
Systems & Telephony Engineer
Linux, VoIP, PBX, networking and automation.

TELEPHONY INTEGRATION CAPABILITY

- SIP signaling and call flows
 - RTP media fundamentals
 - Asterisk and Trixbox administration
 - PBX architecture and call routing
 - SIP gateways and IP endpoints
 - Multi-site telephony
 - NAT, firewalls and VPN connectivity
 - Linux-based telephony infrastructure
 - Customer requirement discovery
 - Interoperability diagnostics
 - Production incident ownership
 - Technical communication with customer teams

AI, AUTOMATION & INFRASTRUCTURE

- CyberCore architecture and development
 - AI agents and LLM-assisted workflows
 - Infrastructure as Code
 - Docker and Kubernetes
 - Terraform and Ansible
 - Python and Bash
 - Observability and monitoring
 - Prometheus, Grafana, Zabbix and Loki
 - Git and API integrations
 - Cloud and virtualized environments

LANGUAGES

Czech Native	English Professional working proficiency / B1+	German Basic
------------------------	--	------------------------

EDUCATION

- SOŠ Benešov — Law and Public Administration, 2006–2007
- Waldorfská škola Příbram, 2004–2006
- Gymnázium Vlašim, 2000–2004
- Continuous self-directed education in Linux, networking, telecommunications, automation and AI

AVAILABILITY

Available for infrastructure architecture, technical leadership and CyberCore partnerships.
